

rPEX[®] Recombinant
Protein
Production

IPA Ranked #1 CRO¹

The proof is in experience.

The rPEX Recombinant Protein Production platform has repeatedly demonstrated its effectiveness across thousands of batch productions. Our experienced team and advanced platform assures the delivery of high-quality, pure protein preparations of antibodies, bi-, tri- and multispecific antibodies, antibody fragments and VHH's, intracellular and secreted proteins and membrane protein ECDs, produced in HEK293 and CHO.

Experience + efficiency — your one-stop protein production resource

rPEX Custom Protein Production

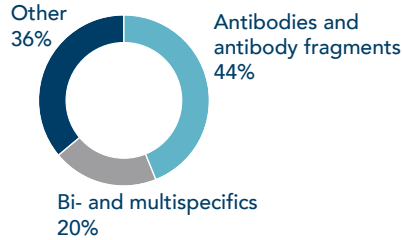

The rPEX platform, renowned for its flexibility, reliability and efficiency, is based on transient recombinant protein production in mammalian cell lines (HEK293 and CHO), delivering the highest quality proteins for research and pre-clinical applications in the range of a few mg to gram scale.

Experienced: breakdown of >8,500 batch productions

Production scale

Protein type

Localization

- Intracellular
- Secreted

Adaptive and reliable

Quality inputs —
Codon optimized synthetic gene design

Collaborative planning and design for production success

Diverse purification portfolio:
protA/G, CaptureSelect, IMAC, Strep-tactin, ion exchange, SEC

High client retention

Efficient:

Programs shipped in 8 weeks / 4 weeks for repeat batch production

Off-The-Shelf Solutions
